DETAILED ACTION

Claims 1-8 and 13-15 are currently pending in the instant application and are subject to the following lack of unity requirement.

Election/Restrictions

Restriction is required under 35 U.S.C. 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Claims 1-8 and 13-15 are drawn to more than one inventive concept (as defined in PCT Rule 13), and accordingly, a restriction is required according to the provision of PCT Rule 13.2

PCT Rule 13.2 states that the international application shall relate to one invention only or to a group of inventions so linked as to form a general inventive concept (requirement of unity of invention).

PCT Rule 13.2 states that unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features.

The general formula I contains various distinct special technical features X is N or C. A preliminary search with partial scope of invention wherein the dot line represents a single bond on STN found projected 55 projected answers (see STN search report). Therefore, the instant application lacks unity of invention, and the claims are restricted preliminarily into three groups, and may be subject to further restrictions.

Group I: Claims 1-8 are drawn to products of formula (I)

Group II: Claims 1-8 are drawn to products of formula (I)

Group III: Claims 13-15 are drawn to a method for the treatment of a disease, which comprises administering to a subject in need an effective amount of at least one compound according to claim 1.

Applicant also needs to elect a single compound as the elected species for initial search purpose.

The claims herein lack unity of invention under PCT rule 13.1 and 13.2 since, under 37 CFR 1.475(a) the compounds defined in the claims lack a significant structural element qualifying as the special technical feature evidenced by formula I' with numerous and widely divergent variables in the compound of formula (I). Accordingly, unity of invention is considered to be lacking and restriction of the invention in accordance with the rules of unity of invention is considered to be proper. Additionally, the vastness of the claimed subject matter, and the complications in understanding the claimed subject matter imposes a serious burden on any examination of the claimed subject matter.

Art Unit: 1626

claimed subject matter imposes a serious burden on any examination of the claimed subject matter.
